Reservoir Engineer II

Provide engineering support to the Reservoir Engineering staff and WD Asset Teams in the areas of reservoir management, reserves management, and economic evaluations. Primary duties will be related to reservoir engineering in the Raton Basin CBM field, including reservoir characterization, gas-in-place estimates, well performance analysis, well spacing determination, decline curve analysis, and discounted cash flow analysis of capital spending proposals including new drills and re-completions. Develop performance type curves to assist with reserves determinations. Provide inputs to the technical components of the ARIES reserve database with support from a reserves analyst. Support on-going development and other exploration projects as necessary. Support requests from corporate headquarters for various data, plots, presentations, etc. required for periodic and ad-hoc reviews. This job description reflects the minimum job duties for the lower level position.

A Bachelor's degree in Petroleum Engineering or related discipline is required with a minimum of 2 years experience in Petroleum Engineering. Must possess strong analytical skills and be proficient in Microsoft Excel. Prior experience in coalbed methane and using ARIES as a reserves management tool is desired. These requirements reflect the minimum requirements for the lower level position. The level at which a candidate is hired into is dependent upon the skill level and previous related experience of that candidate and the minimum qualifications for such level that they are hired.
